

### **3.6 DEVELOPMENT OF CONCEPTUAL PLANS FOR ICT TRANSIT SERVICES ALONG STUDY CORRIDORS AND ROUTES**

---

#### **OVERVIEW**

Work element 3.6 incorporated a refinement of the original sample routes developed by the PMT. Specific technologies and alignment were developed based on knowledge of specific transit technologies, current and future transit plans and ridership patterns.

Included in this section are maps depicting sample routes for each study corridor that note the urban centers and villages, local schools (primary and secondary), hospitals, and potential areas of difficulty along each sample route. Conceptual sketches for selected transit technology within each corridor were also developed and used at the public forums. The following graphics were used at the Public Forums for presentation of Stage I results to the public.

The following graphics depict the corridors and sample routes analyzed in Stage I.
